

Foreign Land Acquisition: Perspectives on Global Landgrabs

Maria Theresa Nera-Lauron

Foreign Land Acquisition (FLA)

- 'fancy term' used to describe phenomenon of capital-rich but resource-poor countries to acquire lands overseas
- FLA is the consequence of AND legitimate response to increasing food insecurity
- FLAs are happening at a massive scale globally!

Food security IS a valid concern.... BUT

- 42% of land projects do not involve food production (cash crops, biofuels, plantation, etc.)
- * Investments come from agribusiness, industry and financial institutions
- FLAs happening because of a few rich countries trying to secure food and energy supplies
- + agro/land speculators looking for new profit opportunities

What are the drivers and motives for FLA?

A. Instability of financial markets – land is tangible asset

- Speculations around population growth, economic crisis, increased demand for food, commodities and agrofuels
- Speculation on increases in land value
- **Fertile soil has become a strategic global asset!**

B. Rising demand for agrofuels & sources of raw materials

- Industrialized countries' 'blending targets' for agrofuels (energy crops such as corn and sugarcane) into their energy supply
- heavy subsidies for agrofuel production
- Ethanol production grew by 15%
- Increased demand for rubber and others

C. Securing food supplies

- Resource poor but rich countries turn to offshore food production to secure long-term food supplies
- Asia (China, South Korea, Japan)
- Gulf States (Bahrain, Qatar, Saudi Arabia)

Why is there increasing speculation in farmlands?

- Land degradation and land use change
- Expansion of agricultural production for non-human consumption → compromises food security

Why is there increasing speculation in farmlands?

- Instability in food and commodity markets due to speculation
- Impacts of climate change

The case of San Mariano, Isabela, Philippines

International Fact Finding Mission (May 29-June 6, 2011)

KMP, IBON, Asian Peasant Coalition, Peoples Coalition on Food Sovereignty

Population: 44,718 people; 7,796 households

Total land area: 146,950 hectares

Forest cover: 78,450 hectares

Watersheds: 17,046 hectares

Isabela Bio-Ethanol and Cogeneration Project

- proposed to be the Phils.' largest agrofuel development
- 11,000 hectares of monocrop sugar cane plantations and nurseries,
- expected to be operational by March 2012, producing 50 – 55 million liters of bio-ethanol /year
- Will consume around 6,000 cubic meters of water per day

- Joint venture by Japanese Itochu Corp. & JGC Group
- Local partner Green Future Innovations Inc.
- approved as 'Clean Development Mechanism' (CDM) project
- to earn carbon credits

*Sugarcane nurseries
encroaching on farm
lands*

*Indigenous Agta
leaders testify that
ancestral lands
were grabbed
through application
of barangay
captain*

Expanses of land once used for food production are being cleared to make way for the Green Future Innovations Inc.'s co-generation and processing facilities.

IFFM conducts interviews with community folk

IFFM dialogue with EcoFuel and Green Future Innovations officials

Summary of findings:

Japanese-Filipino consortium is exacerbating land grabbing conflicts and socio-economic inequities as well as undermining food self-sufficiency :

- * advancing claims that lands are available for conversion into sugar cane plantations;
- * engaging in non-transparent lease negotiations - promoting flagrant violation of contractual commitments by facilitating the growing of sugar cane on these lands;

- * leasing land from peasants through exploitative contracts with substantially lower compensation than would be earned if they continued to cultivate the land and sell their produce
- * threatening the food security and the livelihoods of farm workers who are now planting sugar cane under highly exploitative conditions; and
- * aggravating environmental devastation and destroying the natural climate change mitigation capacities of local ecosystems.
- * increasing militarization and militarism to harass and intimidate people

The bio-ethanol company should not come in because this is land that should not be taken over by a business. The land must be preserved to feed and provide for the people. We will defend the land and will not allow any company to enter and destroy Agta ancestral land. ---- Agta youth
